

ANTOPIA®

The Perfectly Balanced, Eco-Friendly Bait Station that Spells the End for the Queen *and* Her Colony

Containerized baiting is 'Environmentally Friendly' and an effective tool in ant control. Baits use the normal feeding behaviors of the ants to attack the colony without doing harm to non-target species, the air, the soil or beneficial insects.

ANTOPIA®
Spill-Resistant Refillable
Bait Station is the
NEXT GENERATION OF
OUTDOOR BAIT STATION!

For Additional information on Antopia, Gourmet Liquid Ant Bait, Gourmet Ant Bait Gel or Ant Café Bait Stations, Visit us on the web at www.antcafe.com or call **877-483-4997**

The Antopia® Bait Station is a weather-tolerant, bait dispensing system with several unique patented features. Antopia® employs Spiral Ramp Technology [SRT] to make it easier for ants to access the bait and return safely to their nests, where they can share the bait with the colony. Antopia® is designed to hold 7 ounces of liquid, gel or granular bait in a spill-resistant configuration. However, if spill resistance is not a concern, Antopia® will hold up to 14 ounces of bait. Antopia® is built strong for multi-season use and cost effectiveness.

The station has uni-body construction for strength and a spiral anchoring system to hold it securely in the ground. The fill port is easily accessible and has a locking closure. With the Antopia® bait station, ant control is a 24-hour-a-day, 7-days-a-week operation. The bait is protected from the environment and the environment is protected from wasteful broadcast pesticide applications.

Antopia® bait stations are available without bait, so that you can choose the bait that best suits your needs, or prefilled with Gourmet Liquid Ant Bait®, a bait with proven effectiveness on carpenter ants, pharaohs ants, Argentine ants, white-footed ants, odorous house ants and crazy ants, too!
